Oil & Gas Training for the Energy Finance Community!

Analyzing Oil & Gas Company Performance

This one-day course will help those in the energy finance community understand how to calculate and utilize performance metrics to gain both quantitative and qualitative insights into the strength of an oil and gas investment. Topics include operational and expense analysis, cash flow analysis, reserves quantification and validation, capital efficiency, and return on investment. By the end of the course, participants will have a comprehensive understanding of how to use these metrics to measure and evaluate the performance of any oil and gas investment or portfolio holding.

Nov 4th, 2024 / CEUs 0.7 / Cost: \$400

Introduction to Oil & Gas Reserve Reporting

This two-and-a-half-day non-technical course covers all aspects of oil and gas reserve reporting, including basic geological and petroleum concepts related to reserves, the preparation of a reserve report, and understanding and validating its contents. Using practical real-world data, reserve reports, and reserve software, the course emphasizes and demonstrates key concepts. Upon completion, participants will gain a better understanding of how to proactively review, analyze, validate, and identify underlying risks not readily apparent in a typical reserve report.

Nov 5th -7th / CEUs 1.8 / Cost: \$900
