

Continuing Education for Oil & Gas Professionals New Courses:

Oil & Gas Performance Metrics: Concepts & Applications

This one-day course introduces key metrics for analyzing the performance of oil and gas companies. Designed for industry professionals, it teaches participants how to calculate and use these metrics to gain insights into a company's strength. Topics include operational analysis, margin and cash flow analysis, reserves growth, and validation, capital efficiency, and return on investment. Using clear, non-technical language and relevant examples, this course helps participants understand how to identify underperformance, proactively improve, and ensure performance targets and objectives are met.

Sep 30th, 2024 / CEUs 0.7 / Cost: \$400

Introduction to Oil & Gas Reserves

This two-and-a-half-day course covers all aspects of reserve reporting, from concepts to validation. Designed for oil and gas professionals, it equips participants with the tools and knowledge to understand, use, and validate a reserve report. Using clear, non-technical language, the course introduces basic reservoir concepts, reserve definitions, report preparation, and various metrics and methodologies for validation. Real-world data, field examples, and reserve software emphasize key concepts. By the end, participants will understand how to review, analyze, and validate a reserve report and identify underlying risks not readily apparent in typical reports.

Oct 1st-3rd, 2024 / CEUs 1.8 / Cost: \$900

These courses, plus select others, are also offered as onsite training. Please call for additional information on this option
